

Katharina Kreuder-Sonnen

Wie man Mikroben auf Reisen schickt

Zirkulierendes bakteriologisches Wissen und die polnische Medizin 1885–1939

Knowledge does not travel on its own. Bacteriology's laboratory practice depended on comprehensive logistics to be mobilized. Katharina Kreuder-Sonnen follows Polish physicians in their efforts to make microbes travel. Inscriptions of laboratory techniques and the mobilization of laboratory devices were important tools in this process. The history of circulating bacteriological knowledge connects Polish doctors with research institutions from Berlin to Tunis, integrates them into a global history of knowledge and leads us to rethink the categories of center and periphery. At the same time, the study tells us the story of how bacteriological knowledge was introduced to medical practice, first in the Kingdom of Poland and then in the Polish state founded in 1918 – a story which can only be encompassed by taking the practices and materialities of bacteriological laboratory practices into account.

The study was awarded the 2016 dissertation prize of the German Society for the History of Medicine, Natural Sciences and Technology.

Katharina Kreuder-Sonnen Geboren 1983; Studium der Neueren und Neuesten Geschichte, VWL und des Öffentlichen Rechts; 2013–15 Wissenschaftliche Mitarbeiterin am Medizinhistorischen Institut der Universität Bonn; 2016 Promotion an der Universität Gießen; seit April 2016 Wissenschaftliche Mitarbeiterin an der Professur für Europäische Zeitgeschichte nach 1945 an der Universität Siegen.
