

Haggadah in Early Judaism and the New Testament

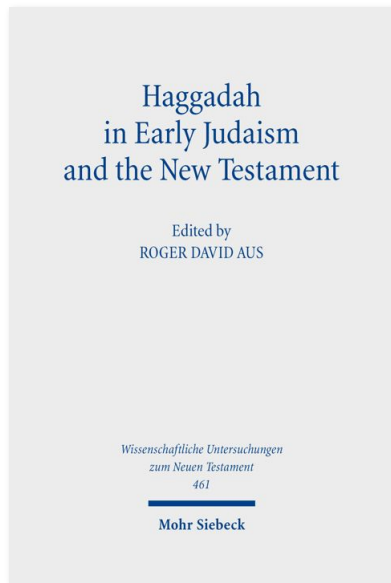

Edited by Roger David Aus

[Haggadah in Early Judaism and the New Testament]

Published in English.

Although it is difficult to define Haggadah exactly, this topic, thus far neglected in New Testament studies, can comprise among other things hyperbole; the addition of names, dates and numbers to an earlier text; glorification of a biblical character; parables to illustrate a statement or principle; and the creation of speeches, even of entire scenes. In addition, it is important in resolving the centuries-old inaccurate alternative of true or false, historical or fictional. The nineteen essays collected in this volume, by leading scholars in their own fields, illustrate in an exemplary way how Jews in Antiquity and Jewish Christians creatively employed haggadic elements in their writings.

Roger David Aus Born 1940; 1971 PhD in New Testament Studies, Yale University; retired pastor of German-speaking congregations in Berlin within the Ev. Kirche Berlin-Brandenburg-schlesische Oberlausitz.
